

TECHNOLOGY PARTNER

E N G L I S H

On the occasion of Sicurezza exhibition, **lseo** stand includes an area dedicated to the Technology Partner programme.

The programme has been conceived to offer electronic solutions by **lseo** which can be integrated into systems developed by other companies specialised in other product, application and service sectors.

The programme has led to the creation of integrated systems which extend the offer and increase the value of individual solutions, offering the market of access control solutions cutting edge technology, high efficiency and advanced security.

INTEGRATED SYSTEMS

The purpose of an integrated solution is to allow different building management and IT systems to interact with each other, even if they were originally developed by different companies.

These systems are ideally suited for a wide range of access control and security management applications.

The synergies of an integrated system make it possible to create modern and interactive tools for access management, rationalising the production and organisational processes of a company and security and access control of residential buildings. The goal of all this is to make systems easier to use, offering improved administrative capabilities and comfort, and a more pleasant operator or user experience.

```
mirror_object = mirror_ob  
tion == "MIRROR_X":  
mod.use_x = True  
mod.use_y = False  
mod.use_z = False  
tion == "MIRROR_Y":  
mod.use_x = False  
mod.use_y = True  
mod.use_z = False  
tion == "MIRROR_Z":  
mod.use_x = False  
mod.use_y = False  
mod.use_z = True
```

```
tion at the end -add back the deselection  
select= 1  
b.select=1  
t.scene.objects.active = modifier_ob  
ected" + str(modifier_ob)) # modifier  
r_ob.select = 0  
context.selected_objects[0]
```

ISEO ACCESS CONTROL PLATFORMS AND SDKs

MORE VALUE TO YOUR SECURITY

The electronic solutions developed by **Iseo** are the logical evolution of the know how of the company in the field of security and use of SDK - Software Development Kit - the open platform on which the Technology Partner programme is based.

The reliability of the brand, its expertise in specialised applications and innovative entrepreneurial vision, and the support of its established sales and technical support networks, are just some of the resources Iseo has drawn from to develop a technological advanced programme conceived to maximise security and improve well-being.

The **Iseo** access control platforms are:

- **Argo**, for residential and light commercial applications.
- **V364**, for commercial and industrial applications.

Both of these **Iseo** access control platforms have an **SDK** – Software Development Kit – and are based on software systems compliant with applicable industrial standards, to offer open interfaces, simple-to-use tools and solutions founded on state of the art IT technology.

Iseo can also create systems which dialogue with **Argo SDK** and **V364 SDK** for its partners, subject to specific technical and commercial agreements.

UTILITIES

A pioneer in electronic, cable free access management solutions, Locken is an IT company with consolidated operations in the European market. Locken became part of the Iseo group in 2016.

CABLE FREE ACCESS CONTROL

Locken access management solutions combine the advantages of electronics with those of a mechanical system based on inductive, contactless technology.

Through a dedicated app it is possible to provide access rights to the operator's key in order to grant him the access in certain locations or areas.

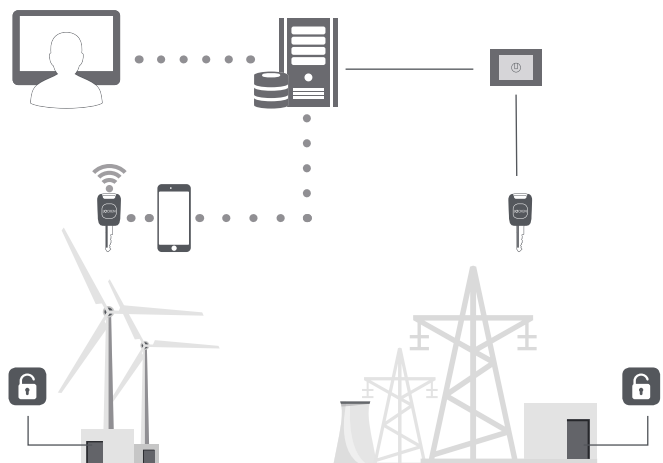

The system is highly dynamic and scalable and is tailorable to the needs of the market or the individual client, offering the advantage of allowing operator authorisations and monitoring activities to be carried out either directly or by outsourced suppliers, for efficient, round-the-clock security management of persons and property with superior service quality.

OPENING CREDENTIALS

SYSTEM DEVICES

The **Locken LSA** (Locken Smart Access) access management system allows access credentials to be transmitted wirelessly, with geolocation validation if necessary, to permit access to mobile users to specific entrances. This significantly facilitates emergency management while offering improved credential security and operational flexibility for users.

Locken solutions are conceived specifically for multiutility companies - businesses with high volumes of user traffic and numerous sites distributed over a large geographical area without possibility of connection to the headquarters.

Locken solutions are applied primarily by companies operating in telecommunications, networking and energy/utility distribution and management (gas, electricity and water).

INDUSTRIAL

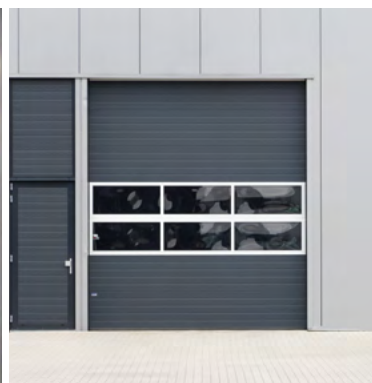

MICRONTEL

Microntel is an Italian company which develops, produces, distributes and provides aftersales support for access control and security systems, personnel time and attendance monitoring systems and production data acquisition systems.

The partnership between **Iseo** and **Microntel** was forged to offer a comprehensive and technologically advanced response to the demand for security, access control and time and attendance monitoring solutions. The result is a system combining RFID and mechatronic technology, and offers two alternative and complementary versions: **on-line** and **off-line**.

Due to the flexibility of Micronpass, the **Microntel** platform, and **Iseo** opening devices, this integrated system allows for multiple level security management, with several access control criteria for different entrance types and programmable in accordance with the infrastructure needs of the client.

This is the ideal solution for industrial facilities and business centres with many entrances and large numbers of personnel and visitors.

OPENING CREDENTIALS

ACCESS CONTROL DEVICES BY ISEO

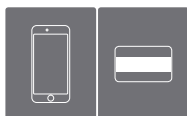

Iseo

DOMOTICS

GEWISS

Gewiss is a leading Italian company specialised in the development and creation of products and new technologies for home automation, and solutions for energy and lighting systems.

OPENING CREDENTIALS

ARGO SMART ACCESS CONTROL DEVICES BY ISEO

Iseo and **Gewiss** have come together to evolve the concept of domestic security.

Gewiss Smart Home system is based on a cloud platform linked to a gateway, which allows the system to acquire data, monitor and manage locks of the **ARGO SMART** range by **Iseo** and all the other home automation devices installed in the household.

The information is managed from an app with a user friendly interface and accessible either locally or remotely.

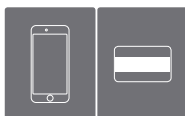

COWORKING

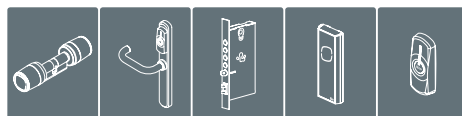

safia

Safia is an Italian company providing a cloud and smartphone based access control platform.

OPENING CREDENTIALS

ARGO SMART ACCESS CONTROL DEVICES BY ISEO

The **Luckey** access control platform by **Safia** works in conjunction with **ARGO SMART** lock devices by **Iseo**.

Based on the most advanced Cloud and IoT technology, this is a highly flexible and easily configurable system, offering significant advantages in terms of installation, maintenance and future updates.

The superior security standards and real time control capability of the platform ensure effective access protection and management even for sites in geographically remote locations.

A partnership creating solutions for new business models such as Sharing Economy, Smart Office, Coworking and the avant-garde concept of Coliving.
