

Secure every corner

Physical security solutions for multi-tenant buildings,
corporate campuses, and distributed facilities

In today's complex environments, organizations can cover multiple locations and be spread across a wide variety of geographies. A key challenge for multi-tenant buildings, corporate campuses, and distributed facilities is how to balance security with the need to provide enhanced experiences for tenants, employees, and visitors.

Introduction

Complex multi-tenant or multi-location environments require innovative physical security solutions with highly intelligent monitoring capabilities to protect individuals and assets while also effectively managing the flow of people. Security directors, facility managers, and property management need to be able to extend their reach to the perimeter and enable their operators to make better decisions and respond to incidents more rapidly.

In addition to protecting assets and personnel, your security platform can also help reduce operational costs and drive revenue. Distributed buildings and facilities are collecting vast amounts of data through multiple systems and an ever-expanding network of sensors. By deploying the right security platform, you could use this data to improve operations and implement changes that would positively affect ROI.

At Genetec, we understand these challenges. Our solutions can help you protect people, physical assets, and data, as well as manage the day-to-day movement of thousands of individuals through your environments. With the ability to aggregate and correlate information from multiple systems and sensors, our unified physical security platform and industry-leading solutions increase intelligence, enhance emergency response, and improve collaboration between operations and security.

Understanding unique needs in large facilities

Property management organizations

From the parking lot to the corner office, property management requires security solutions that protect people and assets while providing enhanced experiences for tenants and visitors. In addition, property management also needs to keep upfront costs as low as possible in order to maintain pricing per square foot.

Investing in an open architecture physical security system that facilitates the integration of existing solutions and supports industry-leading hardware and 3rd party add-ons makes it easier to keep costs down. And a unified solution helps you manage the movement of people and control access to restricted spaces without negatively affecting flow.

With the increased amount of available data, you have the potential to provide greater operational intelligence. This allows you to offer better services, improve efficiency, and ensure the effective use of spaces within your buildings.

Accessing more data depends on greater connectivity. This requires paying careful attention to cybersecurity. While unifying operations and physical security into a single framework can significantly improve efficiency and intelligence, it also has the potential to increase system and data vulnerability. For this reason, you have to deploy solutions that protect data against cyber threats and maintain privacy as they promote unification.

Corporate campuses and distributed facilities

Security directors and facility managers have to address numerous challenges to secure corporate campuses and multi-site facilities. Effectively protecting your people and assets requires solutions that automate responses, centralize security operations, and facilitate compliance.

To prevent operator overload, you must manage the different types of information and alarms they receive. This means implementing solutions that provide proactive monitoring, improve response times, and minimize false alarms.

When proving compliance with government security regulations and mandated responses to incidents, traceability and accountability are essential. To meet compliance requirements, security solutions must feature automated incident determination and response as well as report generation based on check-in and check-out dates, visitor movements, and security actions.

Security directors and facility managers of corporate campuses and distributed facilities also need to effectively manage 3rd party workers, contractors, and visitors. You must ensure that the right people are given access to the right places, especially when dealing with remote sites. To do this, you could move away from a card access/door system towards identity management.

Genetec solutions

Genetec solutions help you secure your multi-tenant buildings, corporate campuses, and distributed facilities. Our feature-rich unified platform, individual solutions, core modules, and 3rd party add-ons can help you address current requirements and future challenges.

The whole picture

Get scalable HD video surveillance and recording, multi-site monitoring, and deep support for a wide range of industry-leading cameras, encoders, and other CCTV equipment with Security Center Omnicast™. With highly intelligent monitoring capabilities, our video management system (VMS) enables security teams to take immediate control of an incident and secure buildings and facilities against potential threats.

Keep everyone moving

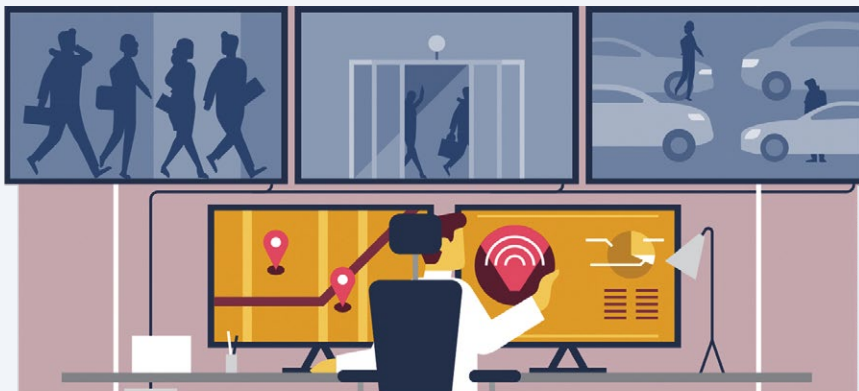

Streamline access control operations by centralizing credential and cardholder management. Our access control system (ACS), Security Center Synergis™, allows you to regulate access rights for tens of thousands of people entering your facilities every day.

Extend your reach

Monitor and secure your parking lots. With Security Center AutoVu™, our automatic license plate recognition (ALPR) solution, security teams can enforce parking rules and regulations, manage permits, and expedite investigations. When combined with data analysis and reporting, AutoVu can also track vehicular activity based on date, time, or plate numbers.

Simplify cardholder management

Global cardholder management gives you the option to manage access to multiple buildings or facilities as if they were part of a single system. By issuing a single corporate card, you can dramatically reduce expenditures and allow traveling employees to move with ease between sites.

Unified control

Our comprehensive security platform with a centralized, open architecture unifies VMS, ACS, and ALPR, as well as 3rd party solutions, within a single intuitive interface. Genetec Security Center helps to secure your facilities through enhanced situational awareness, unified command and control, and fully customizable threat levels. It can also improve building management operations by ingesting data from thousands of sensors and associated real-time information and then qualifying that data more intelligently.

Secure distributed facilities

Centralize monitoring, reporting, and alarm management operations with Federation™. This Security Center feature allows you to supervise distributed systems from a single location. It also enables each individual facility to maintain local autonomy by giving them full control over what is shared and allows you to securely collaborate with local law enforcement.

Respond more effectively

The Mission Control™ module helps organizations comply with government security regulations and mandated responses to incidents. Through automated incident determination and response, your security teams can respond appropriately and efficiently to incidents. And, the ability to generate reports based on check-in and check-out dates, visitor movements, and security actions means greater traceability and accountability.

Comprehensive approach

Link intercom communications with your security application. The Sipelia™ Communications Management module in Security Center facilitates SIP-based communication throughout your organization. With communication management as part of your security strategy, you enhance the situational awareness of security teams and promote greater collaboration across your buildings and facilities.

Whether securing an entire corporate campus, unifying distributed sites around the globe, or extending your reach to the edge of your parking lot, Genetec has you covered. Our solutions help you protect the people, physical assets, and data that matter. And, with a commitment to unlocking operational intelligence and fostering ease-of-movement, we can help you strike the right balance between security and visitor experience.

Because multi-tenant buildings, corporate campuses, and distributed facilities are more than just complex spaces. These are the environments of our future. Let's create them together.
